Synagro to Highlight AllGro® Compost at COMPOST2018

AllGro® Compost Builds Soil Health for Agricultural, Horticultural, Landscaping and Restoration Programs

BALTIMORE, Maryland, January 16, 2018 – [Synagro Technologies, Inc.](#), one of the largest private composters in the United States, will highlight its [AllGro® compost](#) at COMPOST2018, the US Composting Council's 25th Annual Conference and Tradeshow, in Atlanta, Georgia, January 22 to 24, 2018, at the Westin Peachtree Plaza Hotel.

Join the Synagro team inside the Westin at Booth Number 308 to learn about AllGro compost – a nutrient-rich source of organic matter that brings agronomic value to almost any application. Made from carbon-rich feedstocks, AllGro compost is the result of a natural, controlled, biological process. The end result is a high-quality soil amendment used by professionals in agriculture, horticulture and landscape maintenance.

“We are pleased to be exhibiting at COMPOST2018 in Atlanta and join in celebrating its 25th year,” announced Robert Pepperman, director of product sales and marketing, Synagro. “We’re excited to be showcasing AllGro compost because, when used in accordance with sound agronomic principles, it provides both immediate and long-lasting benefits.

“Compost improves the physical structure and biological properties of any soil type by replenishing organic matter; providing slow-release plant nutrients, reducing need for chemical fertilizers; enhancing soil structure and porosity which improves soil moisture holding capacity; and helping build more friable soil which can improve tillage in compacted soils.”

Last year Synagro distributed over 300,000 tons of compost produced at its six facilities nationwide.

About Synagro

Founded in 1986, Synagro Technologies, Inc. provides environmentally sustainable solutions for commercial and municipal organizations that generate organic by-products. Synagro consistently transforms industrial and municipal waste into environmentally friendly resources that benefit our communities. As the largest recycler of organic by-products in North America, Synagro uses best-in-class processes, from beneficial reuse to renewable energy, that adhere to the strictest of environmental regulations to provide compelling solutions for communities across the continent. Serving more than 600 municipal and industrial water and wastewater facilities in the United States and Canada, Synagro's

leading systems of organic by-product management services support municipalities of all sizes in saving money and meeting environmental regulations. Visit synagro.com to learn more.
