

Synagro understands the physical, chemical and biological principles related to working safely within confined spaces. During operations, safety is our priority.

We follow confined-space entry protocol including:

- Completing and implementing lockout and tagout (LOTO) plans with facility staff;
- Opening all available hatches;
- Ventilating with explosion-proof blowers;
- Using self-contained breathing apparatus;
- Conducting frequent air monitoring; and
- Employing complete fall protection.

MORE DIGESTION, LESS DOWNTIME

At Synagro, we're experts in cleaning and servicing aerobic and anaerobic digesters, aeration basins, storage tanks and other tanks for municipal and industrial water and wastewater facilities. Our team of professionals does the job for you, removing grit, sand, rags and other debris in a liquid operation or through mobile dewatering.

With the capability to perform any type of tank-cleaning project and a track record of success upgrading mixing systems and other critical components, they provide superior service and value to a broad range of clients nationwide.

DIGESTER CLEANING

Our experienced personnel are deployed with all the necessary flushing, pumping, venting and safety equipment to quickly and safely remove all organic and inorganic materials that interfere with digester operation.

Using pressurized water they can remove, transport and manage residual solids. Remaining material is slurried into a semi-liquid form and easily removed and discharged using pumps that operate at up to 4,500 gallons per minute.

TANK CLEANING

Our fleet of tankers, pumps and equipment ensures the rapid, safe and complete removal of both solids and liquids from tanks. We employ high-volume, low-pressure water to clean tanks from the outside if the levels of vapors inside require it. Given safe conditions, we perform confined-space entry and move materials to high-volume pumps for direct transport, or mobile centrifuge or belt filter press dewatering as appropriate. Our goal is to provide economical digester cleaning services, consistent with the highest safety, health, regulatory compliance and operational standards.

MINIMAL OPERATIONAL DISRUPTIONS

We work on your schedule, whether you plan to implement a routine cleaning and maintenance program or simply want a skilled and trusted ally on a periodic basis. Your needs are constantly changing, but the Synagro promise remains the same – we'll maximize the efficiency of your digestion system, saving you precious time and money.

We provide:

- Heavy-duty, electric- and hydraulic-powered submersible pumps;
- Confined-space ventilation and monitoring equipment; and
- Material dewatering, conveyance, loading systems, transportation and a broad array of solids-management services.

YOUR PARTNER FOR A CLEANER, GREENER WORLD

OUR PURPOSE IS TO CLEAN WATER, REGENERATE SOIL AND HAVE A NET POSITIVE IMPACT ON PEOPLE AND THE PLANET.

SYNAGRO ADVANTAGE

Sustainable waste management requires more than disposal. It requires solutions that recover value, protect the environment and support the communities you serve.

Synagro partners with municipalities and industrial organizations throughout the United States and Canada to transform wastewater byproducts and organic residuals into beneficial resources. Drawing on decades of experience, advanced technologies and proven operational expertise, we develop resource recovery programs that help customers improve environmental performance, maintain regulatory compliance, optimize operations and create lasting value for their organizations and communities.

HOW WE CAN HELP

Our experienced teams provide integrated support across every stage of wastewater, biosolids and residuals management, from permitting and compliance to facility development, operations and program implementation. The result is a practical, results-driven strategy that helps you achieve environmental objectives, enhance operational efficiency and deliver long-term benefits to the communities you serve.

OUR SUSTAINABILITY STRATEGY

Growing sustainably means gaining a deeper understanding of how we can accelerate and grow our business to positively impact the environment and society. Learn more about our achievements at www.synagro.com/sustainability.

ABOUT SYNAGRO

Synagro Technologies, Inc. is North America's leading provider of sustainable solutions for biosolids, organics and residuals. We offer a comprehensive suite of environmental services to help ensure water quality, support regenerative agriculture and promote circularity. With the most experienced team in the industry, Synagro leverages innovative technologies to help our customers clean water, increase organics recycling and have a net positive impact on people and the planet.
